

Y 2013 Earnings Call

Company Participants

- Alexandre Mafra Guimaraes, Chief Financial Officer
- Gilsomar Maia Sebastiao, Investor Relations Officer and Corporate Finance Officer
- Laercio Jose de Lucena Consentino, Chief Executive Officer

Other Participants

- Andrew Camberwell, Analyst
- Michel Morin, Analyst
- Richard Dineen, Analyst

Presentation

Operator

Good morning, and welcome everyone to Totvs' Fourth Quarter 2013 Results Conference Call. Today with us we have Mr. Laercio Cosentino, CEO of the Company; Mr. Alexandre Mafra Guimaraes, CFO; and Mr. Gilsomar Maia, IRO and Corporate Finance Officer. We would like to inform you that all participants will be in a listen-only mode during the Company's presentation. After Totvs' remarks, there will be a question-and-answer session for investors and analysts, when further instructions will be given. (Operator Instructions). Today's live webcast may be accessed through Totvs' website at www.totvs.com/ir.

Before proceeding, we would like to mention that during this conference call forward-looking statements may be made relating to Totvs' business prospects, operational and financial estimates, and goals based on beliefs and assumptions of Totvs' management and on the information currently available. Forward-looking statements do not guarantee performance. They involve risk and uncertainties and assumptions because they relate to future events and therefore depend on circumstances that may or may not occur.

Investors should understand that general economic conditions, industry conditions and other operational factors could also affect Totvs' future result and could cause these results to differ materially from those expressed in such forward looking statements.

Now I will turn the conference over to Mr. Laercio Cosentino, who will begin the presentation. Mr. Cosentino, you may begin your conference.

Laercio Jose de Lucena Consentino

FINAL

Good morning, everyone. Thank you for participating in this conference and give us the opportunity to discuss Totvs' Q4 and 2013. I'd like to start by sharing our understanding of 2013, a year in which our convictions on the (inaudible) of our strategy was put to test, a year that began with a good economic process. Although as the months passed, inflation proved to be resilient and the product of GDP was constantly revised downwards by the market even with the high credit variability and low level unemployment indicators. This combination of factors results in general increase of labor cost in real terms without productivity.

As a consequence of the business profitability and the confidence of the Brazilian businessman fell, making to adopt their more conservative approaches regarding the investment.

In this context, we decide to maintain the planned investments for the year, even facing a more complex short term market scenario. When I say investments, I mean projects connected to the company's future. We could focus on investments again and even again that comprise human capital and ensure the enhancing of products and service offered by Totvs.

I am talking about human capital, I would like to introduce Alexandre Mafra, our Vice President of Human Relations and Organizational Infrastructure that assumed the CFO role in the first week of 2013. The choice of Mafra for this position was based on a succession plans, which takes into account mainly his professional experience Brazil and his alignment to the DNA of TOTVS.

Mr. Mafra, please share with our investors a bit of your background and that is summarized on slide two.

Alexandre Mafra Guimaraes {BIO 16015106 <GO>}

Thanks, Laercio. Good morning, everyone. My professional career has always had one emphasis on finance. During 12 years at AmBev, I acted at the Central Management as Finance Manager, General Factory Manager, National Financial Service Manager and Training and Performance Management officer. I joined TOTVS in March 2007 as planning officer being responsible for the company's financial planning.

After two years, I took the financial and administrative office when the shared services center was implemented. Unifying our company's administrative areas, such as billing, accounting and treasury are areas which continually under my management as Vice President of Human Relations and Organizational Infrastructure.

These administrative areas are still under my responsibility and by accumulating outlook the Executive Financial Vice Presidency, I would be able to unify and optimize our administrative and financial structures.

Now I'll turn the call to Maia to proceed with his comments about the quarter and the full year results on slide three.

Gilsomar Maia Sebastiao {BIO 16400533 <GO>}

Thanks, Mafra. Good morning everyone. Beginning with the total net revenue. The 14% growth in 2013 as well as 19% in the quarter of performance the five-year figure. Highlighting maintenance and service lines, which together represented more than 78% of total revenue. License fees grew 17% in 2013 and 23% in Q4 year-on-year surpassing the five-year CAGR of these lines, which is our own main recurring revenue and that accounts for almost 49% of total revenue. These results reiterates the resilience of our business model. Servicing revenues grew 16% in 2013. In the first half, this line grew 12% showing the speed up of services execution in the second half as shown by the 23% growth in Q4. This performance in the second half resulted from the actions taken in Q2 to recover the service efficiency.

Moving to license revenue, the 6% growth in 2013 was leaving by sales to existing clients which rose 12% year-on-year. In Q4 the highlights was the 14% growth in sales to new clients with the addition of 970 new clients. Part of this performance was due to the marketing campaigns to sales of new projects based on a specific template for each industry.

These templates are preconfigured solutions with a specific scope shortening the implementation cycle, reducing the solution cost and improving implementation team's efficiency. This sort of experience reinforces our belief in the specialization strategy effectiveness to enhance the solution usage by existing clients as well as increasing the solution attractiveness to new clients.

Our sales pipeline has taken longer to convert into new sales. Nonetheless it's consistent with good opportunities especially in the service oriented sectors which have been gaining relevance in our total revenue.

The traditional marketing actions are also being taken within each industry sectors. They need to reduce the amount of time needed to close the deals, shortening the sales cycle. The sector dynamics and its impact on revenue growth became clearer with the revenue breakdown by the most representative industry shown on slide four.

On the left, we have the representatives in amounts of each sector towards the revenue. On the right, the revenue growth of these industry sectors. Note that in manufacturing and financial services together accounted for 40% of total revenue having their share lowered by 4.8 percentage points between 2011 and 2013.

On the other hand, distribution and logistics, retail and services gained 5.5 percentage points of share in the same period. It's worth mentioning that the manufacturing industry is a traditional investor in IT that contributes relevantly to our recurring revenue and play an important role in our approach as value chains integrators. For distribution and logistics, retail and credit, which are industries with high growth profit.

Commercial services is another traditional IT investor with significant contribution to the recurring revenue. The amount of share presented by this factor is mainly a consequence

FINAL

of the consolidation profits of the Brazilian financial institutions and the movement of the Brazilian capital market, reducing demand for solutions by the asset management. The behavioral diversity illustrates the different levels of maturity of the industry sectors in terms of IT adoption as well as the dynamics of the Brazilian economy in recent years, which is getting more service oriented.

Among these industries, we highlight the demand for our solutions to carriers, distributors and cash-and-carriers that have leveraged their participation in Distribution & Logistics industry. These solutions place us in a unique position in the chain value that integrates manufactures, distributors, and retailers. By the way retail has being an great industry with demand, especially for new solutions of point-of-sales and credit analysis, that integrated are a unique solution for these industries. We believe that investments in our solutions and the expertise of sales and service teams through organic and inorganic actions are key to focusing on industry sectors with higher demand, making Totvs an effective vehicle to capture the growth industries in different moments of the economy.

In a vision to give, Totvs business model has also the resilience as characteristic. Since its origin, the model exercises the recurrence in each event of short term revenues, also a profile of the operation is acquired by Totvs. In summary Totvs' model applies the concept of software as a service regarding revenues even before the service solution become popular. This is more evident, when we analyze the sales to existing clients in recurring revenue. Since the SME is the main focus of Totvs and these companies grow, they buy more and generate more recurring revenue.

On slide five, the total recurring revenue growth in both last three years and Q4 showed the pace which was 12% between 2011 and '12 and 14% between 2012 and '13. The growth was mentioned year-on-year growth of nearly of 80% in Q4 without considering the results of August and September of RMS that were consolidated in the Q4. And the non-recurring effect of about R\$9 million from maintenance contracts settled this quarter. This growth shows that the recurrence of Totvs business model has responded positively to the work performed.

Now, I'll turn the presentation back to Mafra, so he can comment on the acquisitions made by Totvs in 2013 presented on slide six.

Alexandre Mafra Guimaraes {BIO 16015106 <GO>}

In the Q4, we acquired two companies, Seventeen, a development franchise focused on the development of Totvs management solutions especially those for large health insurance providers in Brazil. This transaction reinforced our expertise in the development and service for the very specialized industry sector.

The acquisition of Ciashop which develops an e-commerce platform in the cloud, has more than 1,000 online stores among its clients. It's important to highlight that this business model has more than 80% of recurring revenue. This investment allows Totvs to enter in the cloud, e-commerce platform business, complementing the Fluig offering and

Bloomberg Transcript

enhancing the support by industry sector of its clients, which have or intends to have an e-commerce business.

Looking back on the M&A operations in 2013, we began this new M&A cycle by acquiring PC Sistemas in January in the distribution, wholesale and retail segment. In April, PRX in the other business segment, in August RMS in the retail segment focus on supermarkets. All of these acquisitions fit with our industry and specialization strategies, bringing specific knowhow to our solutions and to our sales team, with opportunity to capture synergy especially through cross-selling.

Right after the acquisitions, the acquired companies started to benefit from revenues synergies on new sales leads from the business ecosystem and from the Totvs branding.

In the second stage, the sales synergy is captured as the solutions are integrated into our portfolio and distribution channels.

On average, these companies grew 16% in 2013 above the average prior to the acquisition.

To conclude my comments on M&A, I see Totvs strategy is strongly connect with the economic dynamics, focus on investment mainly in segments with higher growth prospects in the coming years.

Now let's talk about the international market operations on slide seven. Since 2011, this operations has been steering up its revenue growth and reducing its negative EBITDA both in Brazilian reais and US dollars.

At the end of 2013 revenues from these operations represented 1.5% of total in consolidated revenues. This is the outcome of the actions plan that has been implemented since the beginning of 2012, which aims to grow this operation to the range of 3% to 5% of the consolidated net revenue by 2016. However this growth show the sustainable, gradually reducing losses to achieve the EBITDA break-even given by the end of 2014.

Now moving to EBITDA on slide eight. We ended the year with more than R\$400 million of EBITDA and Q4 was more than R\$100 million which represents an increase of 6.4% in the year and 7.5% in the quarter. This growth is lower than the net revenue growth led to an EBITDA margin decrease of 1.8 percentage points in the year and 2.5 percentage points in Q4.

In order to comment a little bit more on margins side, I ask you to go to slide nine where we have the breakdown of cost of our solutions, sales and G&A as a percentage of our net revenue. In this slide, we can see that the cost of solutions which includes the cost of license fees, services and R&D where those that presented the highest growth. This growth is crucial for the company's productivity since it includes the labor cost and those who have the knowledge of our solutions and services.

FINAL

In addition it challenges us all the time to pursue a good cost balance considering people training, medium and long-term performance and top line growth. Thus as mentioned by Laercio in the beginning of this conference, we decided to keep an appropriate cost balance to maintain investments for the year, even if the top line is below our expectations.

We chose not to stop in investing in projects related to company's future, mainly those related to our technology platform, innovation and the ones related to industry specialization process for assets which are more mature in the solution development, which is important to emphasize our confidence about the return on investments with the medium and long term. We will not lose focus in the cost discipline in this group. I don't mean just R&D here, but also cost of service, which has evolved in the second half of 2013.

In short, the focus of this group is to increase efficiency in service and dilute R&D investments considering top line growth. In the group of cost related to sales, we also had significant investments in the year, especially in advertising and sales. Investments in advertising were enhanced in 2013 to support market campaigns per industry sector. Despite this increase, advertising expenses were in line with historical levels as a percentage of net revenue. Regarding selling expenses, investments are also mainly related to industry specialization both in training the sales team and in the back office structure.

Now on the G&A and management fees group, we keep our effort aiming to increase administrators efficiency in managing the day by day operations and also in the M&A integration. The merger of the vice presidencies of finance, HR and Infrastructure itself, which are now under my management is an example of this effort to have an optimized administrative structure that supports the company's growth.

In summary, without putting Totvs future at risk, we will seek efficiency in our areas, either by increasing revenues or by the alignment of the cost structure.

Now Maia will proceed with the presentation from slide 10.

Gilsomar Maia Sebastiao {BIO 16400533 <GO>}

Starting with the net income of Q4, it's important to keep in mind, the (inaudible) effect from interest on equity than in 2012 were clearly declared in the Q4. In 2013, it was declared partially in Q2 and Q4 diluting its effect June, 2013. This chart showed that we had declared 100% of the interest on equity in Q4 as we did in the previous year; we keep following net income we will have grown 9.8% year-on-year.

In the year, the 7.7% net income growth surpassed the interest growth, mainly due to the reduction of financial expense from a higher average net cash position in 2013.

In slide 11, we have the evolution of the cash flow for the year. We started 2013 with a net cash position of almost R\$170 million, with a R\$120 million in cash and R\$242 million of

Bloomberg Transcript

gross debt.

The operating cash flow of R\$282 million accounted for about 70% of the EBITDA and 137% of the net income. The R\$189 million invested in M&A and venture operations and net income comprised by returning of PC Sistemas, PRX, RMS, Seventeen (inaudible) and the operator operations. The purchase amount of R\$194 million in the net loan which is followed by the inflow of R\$250 million from the R\$658 million of financing line approved by the BNDES in October and the payment of R\$70 million of previous financing line.

By the end of 2013, the cash position amounted R\$533 million, the gross debt amounted R\$407 million totaling the net cash position of R\$126 million. When we entered in 2014, the cash position that grew up from initial capacity to execute both our organic and inorganic investment plans.

The capacity already includes a dividend proposal of R\$0.96 per share presented on the slide 12.

This proposal will be submitted to the general shareholders meeting to be held on March 14, representing a 31% rise in dividend per share when compared to 2012 totaling a R\$155 million, excluding the interest on equity declared on 2013. This proposal represents additional dividend payment of R\$160 million corresponding to R\$0.71 of dividend per share.

Now, I'd like to invite back Laercio for his final remarks on slide 14.

Laercio Jose de Lucena Consentino

By the beginning of this conference, when I said that our commitments were to test in 2013, I meant the conviction on that talk is to pioneer an innovative the company, that growth and invests in order to grow even more and to have its clients, employees, partners and investors.

2013 was a year that we invest in the fundamentals to create a new cycle of thinking, growth of Totvs, besides not having the affects to top line and consequently an EBITDA margin below volatile. Even though we closed 2013 with 14% of revenue growth, 6% of EBITDA growth and 7% of net income growth in the constant cash burn ratio. Totvs' reason for existence is making our clients more competitive in their industry sector. We believe in cost and expense management, giving us authority and responsibility without comprising the company's future.

We started 2014, pursuing margin recovery, emphasizing the discipline of cost and expense and the top line growth based on offerings by industry sectors, assuming that we are even more attention to our clients day by day operations. This is a very important moment for us, as our team had been delivering important structural costs and moving forward in the implementation for the three Totvs' concepts, which are through technology essentially and desired ERP in our products and services, as well as in the training of our team, the enhancing of our distribution and in the light of our clients.

2014 begins with the team that is both ready and are work to five priorities, guidelines of our spreadsheet line for 2014 to 2020, which are simpler in our products and process; more agile, reducing the development and implementation cycles, meaning more efficiency and productive.

More connect, connecting our clients and users by a variable device. More cloud, promoting integrated platforms and management solutions in the cloud, more essentially to the core business of our clients.

Identity evolvment, that is so important for Totvs future, we decided to improve our logo so everyone will remember the day that we started to be a company that is simpler, more agile, more connect, more cloud and more essential. This logo which represents, through the light that shines from interaction of two screens, the ideal positioning for people, enterprise or devices that wants to be connected and become more essential.

Thank you. From now on we are available for Q&A session.

Questions And Answers

Operator

The floor is now open for questions from investors and analysts. (Operator Instructions)
Our first question comes from Andrew Camberwell with Credit Suisse.

Q - Andrew Camberwell

Thank you for taking my question. And I just wanted to go back to the very strong service revenue growth that you had in the quarter because normally there is a kind of correlation with the license sales growth because of service revenues coming so much from implementation, and the growth was so much stronger obviously than the license sales growth. So I was wondering if we could just go back to what the dynamic is that's driving that and if you think this is a trend that we may continue to see going forward?

A - Gilsomar Maia Sebastiao {BIO 16400533 <GO>}

Thank you, Andrew. This is Maia speaking. Regarding service growth, it's important to understand that this growth is also related to our dynamics in terms of industry sectors. Every time we go deeper in terms of specialization by industry sector. We create more opportunities and to our customers to provide more services. And so we become not only a software company, but we can provide intelligence with our solution and really adapting even more our solutions to the specific necessities of our customers not creating a different solution, but more a matter of setting up the solutions on the field in order to address those specific necessities.

You are correct that the correlation is not so perfect as it's used to be in the past when we compare to the license performance, but the license performance in this sense is more related to that sector dynamic and some flexibility that in terms of commercial approach we have when we negotiate the license. So we try to preserve as much as we

can the recurrence revenue. In this case, services play an important role to address those specific necessities and we've become more flexible on the license side.

And your question is if it's a trend, this kind of behavior can be absorbed in the last two, three years at least. I would say that throughout the years not in the short-term but in a gradual movement we probably will see license fee losing relevance in our revenue breakdown. And again I want to emphasize that it's really a gradual movement. But really be a much more concerned about number of clients and transactions we are doing, then the only financial amount of our license revenues.

Q - Andrew Camberwell

Okay, thank you. And just to clarify, so if you have a customer that moves to a more of a cloud-based service and then they switch to basically a different billing model at that point. Is this where we would see the revenue come through on the services line?

A - Gilsomar Maia Sebastiao {BIO 16400533 <GO>}

Look, we have some really few cloud solutions being offered and throughout this time this can affect this model, but really in the short term, it's more a commercial approach, because we try to reduce the initial cost of our project and in the Q4, we launched one specific advertisement campaign regarding those shorter projects in which we challenged our sales to have the implementation done into 90 [ph] days. It help us to add those 970 new customers.

All the time we understand that the last mile of the -- related to the relationship with the customer and the implementation plays an important role and considering those long-term trend including cloud computing are in the same line. So we just in the relevance of this kind of one-off revenues and strengthening the importance of services in the recurrent revenues.

Q - Andrew Camberwell

Okay, great. Thank you.

A - Gilsomar Maia Sebastiao {BIO 16400533 <GO>}

You're welcome.

Operator

Our next question comes from Michel Morin with Morgan Stanley.

Q - Michel Morin {BIO 1873971 <GO>}

Yes, thank you. Just a follow-up Maia on Andy's question. So can we expect therefore that your service revenues will continue to drive maintenance revenues?

A - Gilsomar Maia Sebastiao {BIO 16400533 <GO>}

FINAL

Michel, really we understand that independently if the model is more based in license or not number of transactions new see an important indicator. Services, in terms of new customers they are part of a sequence in which it starts from the license fee and then the second stage is the implementation really and the third is the maintenance. That's the classical model we keep in mind. In terms of existing customers, it's pretty common to have sometimes the opposite customers demanding more specialized or complementary implementations or specific services to fine tune the system, and that helps the customers to enhance the usage of the system, and consequently, so this brings more licenses in the future.

So in having this kind of performance we had during the year of 2013 in the previous years, it reflects on this kind of performance of service. But being more objective to your question, I see independently we -- in the future, for example, in the medium to long-term future, if we are more based on a completely solid [ph] model services we always be an important component and be very correlated to recurring revenues.

Q - Michel Morin {BIO 1873971 <GO>}

Okay, great. That's very helpful. And then secondly, regarding your EBITDA margin guidance, I think to paraphrase you had said a few years ago, that you expect it to be between 27% to 30% and I think you had given a timeframe of 2013 to 2016 or something like that. If you could just clarify that?

And then related to this, when you make -- when you gave that guidance a few years ago, this was before Brasil Maior, which has probably added close to 200 basis points to your margin. So your margins are now at multi-year lows if you were to adjust for Brasil Maior. So I just want to make sure I understand what has changed, why has the trend actually gone in reverse. And if it's only the top line, then that's fine. But I'm wondering if there is something else more fundamental that has changed. Thank you.

A - Gilsomar Maia Sebastiao {BIO 16400533 <GO>}

You're right. So the guidance was disclosed, if I'm not wrong, in the beginning of 2009, it was regarding the period comprising 2013 and 2015, this range of 27% to 30% of EBITDA margin, and unfortunately in 2013 we were below the low level of this range of 27.

And in terms of cost side, starting from your point related to Brasil Maior. Brasil Maior was changing that the government made in terms of taxation. So instead of charging or taxing my payroll, the government decide to charge really the tax over my sales. And -- but this in the beginning, it created some positive net effect, but throughout the time it started to be absorbed especially among some negotiations with the salaries and wage increase and other costs and then instructs all the markets in fact to try to capture this kind of gain. All the stakeholders around players that to realize these effect of Brasil Maior and it became part of our cost structure. So your colleague, Diego, was trying to exercise what was the effect of Brasil Maior, really know this is very hard to calculate that cost because it has already incorporated in our cost structure and it was the same in our competitors. It's one rule applicable for all the players in our industry in almost 70 sectors in the Brazilian economy.

FINAL

But the reason for focus to be out of these range in our guidance. In our view, it's more related to two things. The first one is the top line being lower than we planned for these while and I think it was not only one thing that we sold this office to most of other companies and analysts, they were expecting a better scenario for this new and for this time. But in other hand, we decided not to stop important projects related to the future. At this moment they reflect into a more profitable structure for us. We understand that every time, we decide to take these features like that to be -- to become more especially in some sectors. It reflects firstly in the cost side. And of course, we want to see the feedback of those investments in our top line.

But we have to understand that to manage this different behaviors of revenues and costs in 2014. We have to be even more disciplined in terms of cost structure to extract these kind of results in the top line.

Q - Michel Morin {BIO 1873971 <GO>}

And from your release, you are stating that you expect to -- you are maintaining your guidance basically. So for 2014, your expectation is that, your margin would be at least 27%, if I read your release properly?

A - Gilsomar Maia Sebastiao {BIO 16400533 <GO>}

Yes. You read and we are pursuing this at least -- the bottom of the range this guidance.

Q - Michel Morin {BIO 1873971 <GO>}

Okay. Great. Thank you.

A - Gilsomar Maia Sebastiao {BIO 16400533 <GO>}

Welcome.

Operator

Our next question comes from Richard Dineen with HSBC.

Q - Richard Dineen {BIO 5517898 <GO>}

Thanks very much for taking the question. Again on the cloud, I am just thinking how investment and your in-house development platforms like Fluig and acquisitions, and as well as moving to this more of a on-demand revenue model, how that might affect your margins in the medium and long term? And I guess I was thinking we saw SAP lowering the medium-term margin guidance as they sort of expecting quite a rapid tipping point for cloud services over the next few years.

I think they probably only get about as much revenue as you guys do from cloud at the moment, but they are expecting that to move to 15% to 20% in the next couple of years. I am just wondering what you are anticipating in terms of that transition of the Brazilian SME and corporate clients to cloud delivery over the next couple of years and what that might

mean for profits again in the context of your guided margins? That will be very helpful. Thank you.

A - Gilsomar Maia Sebastiao {BIO 16400533 <GO>}

Thank you, Richard for the question. Again, this is Maia speaking. I understand your question. When you take SAP actions in the short term. In my view, we have different scenarios and situations here between Totvs and SAP. In our case, the main investments are more oriented to this kind of specialization or segmentation by industry sector. We have in cloud, is one element in our strategy related to in our view more infrastructure. So the way you deliver will deploy solutions we developed.

So we understand that we have to address the necessities of our customers independently if they use of solution completely on (inaudible) or partially in the cloud or completely in the cloud. Cloud for us means more infrastructure. I know that some players, they are making some huge investments in terms of infrastructure to provide cloud services and that's not our case at this moment.

We have a small data center adoptable for the reality of our customers. It's more mid-sized customers from medium to high-end customers as well. But our main efforts are more related to our platform, like knowledge platform and the application, the management solutions really, and those applications and platforms are very hybrid solutions because they can direct with our frames in the cloud solution simultaneously. And I would drive the analysts and investors just seem that the increase of our investments are just related to cloud, it's much more than that.

In terms of return, as I responded to Michel Morin and Andrew previously, we really see those actions in terms of our structure as cost. And consequentially, we have to see returns from those investments and the return has to be converted into sales and consequentially we can dilute those investments for all the time. I don't know if I addressed properly your question and if no, you can please complement it.

Q - Richard Dineen {BIO 5517898 <GO>}

No, that's really helpful, thanks very much. Maybe just one quick follow-up if I may and apologies if I missed your comments on this in the prepared remarks. But, you talked about the and the way through renegotiations in the fourth quarter in certain states. I'm just wondering if you might give us an idea of any upcoming bargaining agreements with unions in other states that might going to come up in the next year? Any sort of guidance on that would be helpful.

A - Alexandre Mafra Guimaraes {BIO 16015106 <GO>}

Fortunately, it's hard for me to provide you a guidance related to that. Maybe historicals can help you in this sense. Every first Q1 and Q4, we disclosure on our earnings release in percentage of -- coming out from those negotiations, when you can compare historically how the negotiations in Sao Paulo, for example behaviors comparing to others. These negotiation is really in course, and at this moment I wouldn't comfortable to comment on the negotiation because it's a collective negotiation, it doesn't involve only Totvs.

FINAL

It's a regionalality negotiation involving technology companies and the union of professionals from the technology sectors. It's really a collective negotiation and it's hard to give you a guidance speaking only about Totvs. But really we are working for 2013 conservatively with few scenario of inflation, resilient inflation in this year. We shouldn't consider different scenario, and for those that follow us for a longer time, they know that our business margins is also the sense that business model in the medium long-term in terms of inflation, because we have instruments to pass through inflation in our revenue lines. We have maintenance contracts automatically adjusted by inflation, services team adjusted, especially the hourly rates when we have costs being adjusted in terms of personnel. In license, it's more commercial dynamic in the market. So we have to follow the license dependent in accordance with the dynamics of commercial negotiations.

Q - Richard Dineen {BIO 5517898 <GO>}

Okay, thanks. That's great. Many thanks indeed.

A - Gilsomar Maia Sebastiao {BIO 16400533 <GO>}

Okay, thank you.

Operator

Our next question comes from Michel Morin with Morgan Stanley.

Q - Michel Morin {BIO 1873971 <GO>}

Thank you, thanks for the follow-up. So you gave additional disclosure this quarter. So we thank you for that. And specifically on the revenue by industry, I thought that was very helpful indeed. I guess the key question I would have there is when you look at some of those verticals and the growth rates year-on-year, was there any trend during the year that you think was notable that you would be willing to share with us?

And specifically I am wondering whether or not the manufacturing segment, your largest one, which grew 4.5%, whether or not you saw any pickup in activity during the year? That will be helpful. Thank you.

A - Gilsomar Maia Sebastiao {BIO 16400533 <GO>}

Well, Michel, really it was a demand from you and investors, you analysts and investors, this kind of breakdown. And we've tried to show both things, the relevance of those factors in terms of our revenue and the growth they are presenting this while.

It's hard to comment that relations [ph] of these factors through the year because really. We cannot completely control the negotiations growth as you know. The decision process in the customer -- in the customer side, they have very different depending the reality of the customer and really there is no clear set[ph] of knowledge in the whole behavior that we can identify and say look -- the asset specific moment of the year that the industry is more active or not. Of course, there are certain factors that we notable for everyone that's like the retail when they are closer to the end of the year increase in Christmas

Bloomberg Transcript

time, they are not so active in terms of investments especially related to the infrastructure. So some seasonality typically regarded to those industries. But besides that, there is no one specific thing that I can tell you. So the dynamic of the year...

Q - Michel Morin {BIO 1873971 <GO>}

Maia, sorry. Yeah, I was talking in terms of the year-on-year growth rates basically, so there would be no seasonality if you think about it year-on-year. And the reason why I am asking the question is, because given that the real has weakened during the year, given that the manufacturing part of the economy may be more sensitive to the currency and may be more willing to invest when export markets open up, thanks to a weaker currency.

I'm wondering if perhaps you started the year with your manufacturing clients spending less year-on-year and you closed the year maybe up 10% such that the average was 5% for the year. That's really what I was trying to understand, if there was any change in any of the verticals really, but that one in particular. But that's fine if you don't have this handy.

A - Gilsomar Maia Sebastiao {BIO 16400533 <GO>}

Yeah, look, when we talk about manufacturing them, there are guys within manufacturing more or less affected by exchange currency rate. I understand your point, but really it's hard to give you more detail on that at this moment.

Q - Michel Morin {BIO 1873971 <GO>}

Okay, that's fine, Maia. Thank You.

A - Gilsomar Maia Sebastiao {BIO 16400533 <GO>}

You're welcome.

Operator

(Operator Instructions) This concludes today's question-and-answer session. I would like to invite Mr. Laercio Consentino to proceed with his closing statements. Please go ahead, sir.

A - Laercio Jose de Lucena Consentino

Thank you for everyone joining our conference. I would like to say that we will not waste a single minute of 2014. The recap of 2013 has done and all teams are working in our goals. We have more than 12,000 people including our franchises and (inaudible) that we just discussed and completed talks on our pursuing our goals. I wish a great year for everyone. Thank you very much.

Operator

Thank you. Totvs' first quarter results conference call is now over. Have a nice day.
