MANAGEMENT DISCUSSION SECTION

Operator

Good morning, ladies and gentlemen, and thank you for waiting. At this time, we would like to welcome everybody to Minerva's fourth quarter and full year 2014 results conference call. Today with us, we have Fernando Queiroz, Chief Executive Officer; Edison Ticle, Chief Financial Officer; and Eduardo Puzziello, Investor Relations Officer.

We wish to inform you that this event is being recorded and all participants will be in a listen-only mode during the company's presentation. The audio and slideshow of this presentation are available through a live webcast at www.minervafoods.com/ir. The slideshow can also be downloaded from the webcast platform in the Investor Relations section of this website.

Before proceeding, we wish to mention that forward-looking statements may be made during this presentation relating to Minerva's business prospects, operating and financial estimates and goals. They are based on the beliefs and assumptions of the company's management and on information currently available.

They involve risks, uncertainties and assumptions because they relate to future events and therefore depend on circumstances that may or may not occur in the future. Investors should understand that general economic conditions, industry conditions, and other operating factors can also affect the future results of Minerva and could cause results to differ materially from those that are expressed in such forward-looking statements.

I would now like to turn the conference call over to Mr. Fernando Queiroz, CEO, who will begin the presentation. Sir, you may begin.

Fernando Galletti de Queiroz {BIO 15387377 <GO>}

Thank you very much. Good morning, everyone, and thank you for participating in Minerva's conference call on the results of the fourth quarter and full year of 2014. I would like to begin by showing that the company closed 2014 having reached its growth in integration targets. The result presented today is the main indicator of the consistency, assertiveness and discipline of the goals established.

Throughout 2014, we took important steps in the company's growth plan with the expansion of our operations to the state of Mato Grosso and Minas Gerais in Brazil, also the acquisition of another plant in Uruguay; a good moment for the industry in that country. Two weeks ago, we announced a memorandum for the acquisition of a plant in Colombia in a pioneering movement for that country, which has a large herd and a great growth potential, both in terms of domestic and export market.

Minerva has been consolidating its leadership position in South America in a focused and disciplined manner in line with the planned announced to the market at the end of 2012. It's the beginning of 2015 with a more diversified and efficient industrial complex. In 2014, we reached very satisfactory results from an operational and financial standpoint as we will discuss moving on to slide 2.

Slide 2, the highlight of this quarter was a free cash flow generation, which totaled BRL 159 million, positively impacted by the release of a BRL 165 million in working capital, thanks to the company's successful strategy of maintaining higher inventories in the third quarter in order to benefit from the higher prices in the fourth quarter and the improvements in other accounts payable. As a result, the cash conversion cycle came from 29 days in the third Q of 2014 to 23 days in the end of 2014, lower than the year's average.

Return on invested capital remained high, reaching 21% in 2014, in line with 2013, reinforcing management's commitment to focus on shareholder's return. In the fourth Q of 2014, we posted record net revenues, 47% higher than in fourth Q 2013, superposing the market of BRL 2 billion in a single quarter, as a result of the new capacity added, most of which concentrated in the last quarter but also due to organic growth.

In 2014, revenues grew by 28% to BRL 7 billion (04:58) not only by the Beef division which moved up to 26%, but also by Others division which includes the live cattle exports, leather, Minerva Fine Foods, and recorded a 40% increase in revenues compared to 2013. Considering the pro forma figures of the Mato Grosso and Carrasco operation, net revenues came to BRL 8 billion in 2014, a significant growth of nearly 50% when compared to 2013.

EBITDA adjusted for non-recurring items totaled BRL 196 million in the fourth Q 2014, 28% up year-on-year with a margin of 9.2%. In 2014, considering the pro-forma figures, EBITDA totaled BRL 760 million, 38% higher than in 2013 with a margin of 9.5%.

FINAL

Bloomberg Transcript

In 2014, exports accounted for approximately 65% of the company total revenues, reflecting growing demand and reduces the beef supply from other players in international market. The result of our focus on risk management and efficiency of channels was reflected in our export performance. Minerva was among the largest fresh beef exporter in South America in 2014, and its sales grew by 80% over 2013.

In the domestic market, revenue growth was even higher, 39% over 2013 supported by our distribution expansion plan, with a focus on small and medium retailers and especially on the food service.

In regard debt management, the company growth in the year with only 40% short-term debt and a cash position of BRL 2.5 billion leaving the company prepared for more, a diverse macroeconomic scenario that eventually can happen in Brazil.

Finally, I would like to highlight that in view of the company's growth and in order to make the decision-making process quicker, we have adopted a new corporate model with the creation of four business units, led by COOs. The business units are Beef Brazil, Beef South America, Distribution and Logistics and a division of Others.

Let's move on to slide number 3 to discuss the industry overview in cattle supply in Brazil. In 2014, the average arroba price increased by 23% over 2013 as shown in the graph on the top right. (07:56) explained by a number of factors. First, the industry maintained the accelerated slaughter pace observed in 2013 as a result of the combination of healthy demand for beef in the domestic market and another record year in exports. In addition, we had a difficult weather event in 2014 with drought in the harvest season and more pronounced rain shortage in the off season.

Finally, lower grain prices encouraged feedlots operators to maintain the cattle in the feedlots for a longer period. These factors pressured the cattle price. However, (08:35) demand for beef in the domestic market combined with new export records in Brazil allowed good profitability in the sector.

Let's move now to slide 4, and we will analyze the performance of the Brazilian exports. In 2014, Brazilian beef exporters posted record volumes and revenues, totaling approximately \$6 billion, 8% up on the revenues recorded in 2013. Exported volume totaled 1.2 million tonnes, 4% more than in 2013. In 2014, the highlight in exports was the 4% upturn in the average price in dollars of the Brazilian beef, compared to the average price of 2013, thanks to the improved competitiveness and better pricing power of the Brazilian producers, who have benefited from restricted supply by the main global producers.

Another highlight is the evolution of Brazilian exports by definition, analyzing the mix of 2007 before the global crisis. More than 60% of the exports were concentrated in Russia and in Europe. In recent years, the sale and distribution has become more balanced. This was due to the opening of new markets. The reversal of embargoes, the progress of sanitary status in several states, and the ongoing initiative of the government and the

private sector together, in addition to the ever-increasing demand, and the fact that Brazil is prepared to meet this growth in consumption.

As a result, in 2014, Asia became the second main market for exports with 22% share against only 6% in 2007. Americas shares, especially Chile, grew 5% in 2007 to 21% in 2014. This shows the wide variation in the designation of Brazilian exports and growing demand from emerging countries.

Let's move on to slide 5, which presents our performance in the domestic market. Domestic beef consumption remained strong throughout 2014. Although the Brazilian economic environment was more volatile, beef demand remained resilient, which was reflected in a price increase mutually on par with the upturn in arroba prices. As you can see in the graphs on slide 5, both the average price of forequarter cuts, which are normally cheaper and that of hindquarters cut increases over 2013 when beef prices had already gone up.

We would like to mention the expansion of the food service segment in Brazil, which has substantially increased the beef consumption. According to the Brazilian Association of Food Industry, this segment grew 15% per year in the last five years. This performance is higher than that of traditional retail channels. In addition, Brazilian food consumption outside the home climbed from 19% in 1995 to 33% in 2013. These figures reinforce Minerva's strategy of focusing distribution in the foodservice segment.

Now, let's have a look on slide 6, and we will discuss the industry in Paraguay. After a period of adjustment in late 2013, the Paraguayan industry presented a very balanced behavior in 2014. We saw very solid operating margins. Slaughter volume was on all-time highs, 12% up on 2013, mainly fueled by exports. Paraguay has continued to obtain healthy prices for its beef in the international market, benefiting from a favorable moment in terms of external demand and becoming an increasingly important global beef supplier. Despite a strong slaughter volume, the average cattle price remained virtually flat compared to 2013, benefiting profitability.

In the Paraguayan export mix, you can see the shares of Brazil and Chile increased, reducing the dependence on the Russian market. In addition, there is an increased profitability that new markets will open such as Europe, which is expected to happen in the first half of 2015.

Let's have a look on slide 7 where we will discuss the industry in Uruguay. Uruguay, 2014 was an important year for the Uruguayan beef industry. Margins remained favorable throughout the production chain. In 2014 exports revenues was 10% higher than in 2013, totaling approximately \$1.5 billion. The share of the United States increased to 15% of the total.

Uruguay has benefited from a privilege position in the global beef market. Among the factors that explain these positive dynamics, we highlight first, the cattle cycle is in very favorable moment. With high cattle availability which enabled a slaughter of more than 2 million heads in 2014, 6% more than in 2013 with stable cattle price.

FINAL

Bloomberg Transcript

Secondly, Uruguayan beef has access to a higher number of niche markets such as United States, Canada and South Korea, as well as the fastest-growing markets such as Mainland China, allowing higher beef prices. Finally, industry maturity brings more rationality to the operations and therefore, more sustainable margins.

Let's move to slide 8 where we will discuss the Minerva's operations and its results. Slide 8, in 2014, the company's slaughter volume totaled more than 2.1 million heads and the utilization rate stood at 71%, excluding the operation of the plants acquired in 2014, which are still in the ramp-up stage. The utilization rate was near 73%, which makes us benchmark for the sector.

Taking advantage of the favorable moment for exports, we recorded a total volume of 277,000 tonnes in 2014 and approximately 77,000 tonnes in the 4Q of 2014 on itself. As a result, 60% of the total gross revenues of Minerva came from exports in 2014.

Let's have a look on slide 9, which presents the company export strategy in detail. In 2014, the company remained the second largest exporter of beef in Brazil. Minerva accounted for 16% of exports in Uruguay and 15% in Paraguay. This slide also shows Minerva exports trend in the period. You can also see a more balanced distribution of sales between the regions.

I would like to draw your attention to the increased share of Asia in the company's exports and the continuous growth in demand from this region, which in 2014, accounted for 15% of our total exports, 300 bps above the figure reported in 2013. The main designations have been not only Hong Kong and China, but also other countries such as Malaysia, Singapore and Philippines. This demonstrates the increasing beef consumption in this region.

We have also observed a 200 bps increase in exports in the NAFTA countries led by United States. This region is served by our plants in Uruguay and this increase in exports confirms limited supply in the United States.

In slide 10, let's present the revenues growth in Minerva main business units. The Beef division accounted for 77% of the gross revenues in 2014. In this segment, the export market grew by 19% over 2013, while the domestic market moved up a substantial 39% over 2013. The company has been making a series of adjustments to the domestic market distribution with the simplification of the strategic guidelines, team training and capacity building, increased focus on the food service segment and execution discipline.

We are already able to see the first result in the 4Q of 2014, with 40% increase in the revenues compared to the 4Q of 2013. The Other divisions represented 23% of total gross revenues. The highlight in this division was 56% upturn in revenues from live cattle exports. In 2014, we began new operations in Chile and intensified our operations in Uruguay focusing on dairy cattle exports to Asia branching out from the conventional live beef cattle exports.

Now I will turn to Edison who will comment on the financial highlights.

Edison Ticle Melo e Souza Filho {BIO 20119771 <GO>}

Thank you, Fernando. Good morning, everyone. Slide 11 and 12 presents our financial highlights. We ended 2014 with net revenues that includes the pro forma results of the Carrasco and Mato Grosso plants of around BRL 8 billion, a 47% growth comparing to 2013.

In the 4Q 2014, net revenues exceeded BRL 2 billion a quarterly record. Adjusted EBITDA considering the pro forma figures of Carrasco and Mato Grosso plants reached BRL 760 million, 38% higher than in 2013 with a margin of 9.5%.

In 4Q 2014, EBITDA adjusted for the non-recurring items reached BRL 196 million, 28% higher than in 4Q 2013 with a margin of 9.2%. It is worth noting that quarterly EBITDA was also impacted by the consolidation of the operations of the plant in Mato Grosso whose margins are still lower than Minerva's consolidated margins, and the natural ramp-up process at the Janaúba plant that was launched in October 1.

Moving out to slide 12, we once again recorded high return on invested capital of 21% in line with 2013 keeping our position as a benchmark for the sector. Leverage measured by the net debt to EBITDA ratio stood at 3.7 times at the end of 2014. Despite the dollar increase which has direct impact on the company's dollar-denominated debt, leverage was in line with the previous quarter. This result was due to the company's efficient risk management by having an active hedging policy, combining with the positive impacts of the recent acquisitions and, more important, the free cash flow generated during the quarter.

Operating cash flow reached BRL 341 million in 2014. We will discuss later on the main lines that impacted this account. The cash conversion cycle closed 4Q 2014 at 23 days, six days shorter than in the previous quarter. The average for the year of 2014 was 25 days.

I would also like to mention that the company has a target of, keep its cash conversion cycle in the range of 15 to 20 days, which was our average in 2012 and 2013, and we will pursue this target during 2015.

Moving on to slide 13, we will present the net result. The 13% appreciation of the dollar to the real in 2014 generated an FX variation on the dollar-denominated debt of more than BRL 460 million. Only in the 4Q 2014, the foreign exchange impact reached BRL 251 million. It's worth to mention that it is a known cash impact.

In 4Q 2014, the company also decided to join the REFIS program, which is a refinance of debt with the tax bureau in order to speed up the ratification of tax credits as of 2015. So, by joining the Brazilian government program, the REFIS program, will allow the company to speed up the monetization of credit, especially the export credit on 2015. The impact of this REFIS program was around BRL 111 million, BRL 36 million of which referring to the principal, and BRL 75 million to fines and interest. Excluding these two effects with the impact of income tax and social contribution, the company's adjusted result would be a positive BRL 156 million in 2014, and a profit of almost BRL 27 million in 4Q 2014.

FINAL

Bloomberg Transcript

Let's go to slide 14 to talk about operating cash flow. Operating cash flow was a positive BRL 256 million in 4Q 2014. Working capital released BRL 165 million, led by inventories. We reduced our inventory turnover from 39 days to 33 days in the last quarter of 2014. This was the result of company's risk management strategy of benefiting from higher beef prices in 4Q 2014, keeping higher inventories at the end of the third quarter.

We would also like to add that most part of the animals of the cattle acquired from BRF in the second quarter were already slaughtered which is the reason why the biological assets line showed an improvement.

It's worth noting that in absolute figures, inventories increased. Thanks to the combination between the 40% upturn in the company's capacity and the annual upturn in cattle prices. Therefore, these accounts should be analyzed comparing to revenue generated in the quarter, which shows a reduction in terms of days of inventories more clearly.

Let's move to slide 15, to talk about free cash flow. In the last quarter of the year, the free cash flow after CapEx, interest payments and working capital reached BRL 159 million. As I mentioned, working capital contributed with BRL 165 million; investments CapEx with a cash impact reached BRL 64 million and cash financial expenses were BRL 138 million in the quarter.

On slide 16, we will present the company's capital structure. Minerva closed 2014 with a cash position of approximately BRL 2.5 billion. Excluding the bonds that were repurchased in 2013 and 2014, the company's cash stood at BRL 2.1 billion, which is enough to pay down all the debt until 2022.

We would like to draw your attention to the fact that despite the environment of high exchange rate volatility, which resulted in 80% appreciation of the dollar in the quarter, the company was able to keep net leverage - net-debt-to-adjusted EBITDA ratio of 3.7 times, pretty flat when you compare to the third quarter.

Short-term debt reached 14% of total debt. The increase over the 3Q 2014, is in line with our strategy to reduce the average cost of debt using short-term trade finance lines and complies with our financial policy to keep a maximum of 20% of the total debt mature in the short-term. 77% of our debt was denominated in dollar.

It's also important to mention that the company has an active hedging policy. And, in 2015, one of the tools that we used to protect the balance sheet was the repurchase or the bond buyback of our 23 (25:53) in the open market, especially when the bonds were trading down and reached 93%, 94% of face value.

Now, let's move to slide 17 to present leverage. Considering 100% of the perp bonds debt, the company's leverage stood at 3.7 times as I have already mentioned. However, if we take into account that these bonds, Minerva or (26:25) the company has the option to never redeem these bonds. It's an option that the company has and you exclude the perp bonds in the leverage calculation, the net debt to EBITDA ratio would fall 2.7 times. This

shows the flexibility that this instrument brings to the company's capital structure, especially in a scenario of more restricted and more costly credit.

Now, I'll turn it back to Fernando, who will comment on Minerva's investment plans.

Fernando Galletti de Queiroz {BIO 15387377 <GO>}

Thank you, Edison. In 2014, we concluded expansion of our operations in Brazil, with the acquisition of the two plants in Mato Grosso, the only state that we were not present. We remain focused on expanding our production platform outside Brazil. And in line with that, with our global goals, we acquired the Carrasco plant in Uruguay. And two weeks ago, we announced (27:27) movement for our Brazilian player.

Our debut in the Colombian market with our Memorandum of Understanding for the acquisition of the Red Cárnica, a plant in the Córdoba region in Colombia. With these acquisitions, we reiterate our strategy of expanding our operations in South America, which has a unique competitive advantage for beef producers worldwide. Also, we opened a distribution center in Paraguay and a sales office in China. As a result, we are lining the capacity expansion with the logistic optimization and distribution channels.

Let's move to slide 19. Now we can discuss the recent acquisitions in Colombia in further details. Colombia (28:12) has a great potential for the development of the meat packing industry, whose current business model is different from the way that the industry is structured in Brazil, Paraguay and Uruguay, based on the service agreement with cattle producers (28:27) entry in this market is based on a number of factors. Colombia currently has a herd of approximately 25 million heads compared in size to that of Australia, therefore very meaningful.

The Córdoba region, where the Red Cárnica's plant is located is the most important beef-producing region with large cattle availability. Although it has various permits to exports to Middle East, Egypt, Hong Kong and Russia among others, Colombia is not yet focused on exports as Uruguay and Paraguay are.

Colombia also has a Free Trade Agreement with the United States, and there is a possibility that other markets will open to Colombia. The domestic market also has attractive growth potential. Currently, global retail chains are already present in the country. So, there is a great demand for optimization (29:22) in the industry.

Minerva entered into MoU for the acquisition of Red Cárnica for a total amount of BRL \$30 million, including the assets that we purchased, future investments and working capital that's required. The acquisition is part of the company's strategy of geographic diversification (29:44) in addition to bringing competitiveness and advantage mitigate risks and allows increased arbitrage between markets. So this concludes the business plan that we presented for the market in 2012 that we had as it goes for the year of 2015.

Now, let's have a look on the scenario for 2015, and what is different now. The global imbalance between this supply and demand will continue in 2015, giving that important

FINAL

Bloomberg Transcript

producing countries are going through retention cycles, which is affecting beef availability. On the other hand, demand remains positive and influenced by emerging economies such as Asia countries, but also developed markets that depends on imports and are increasingly demanding - regarding beef quality.

The imbalance has improved with the pricing power of South America exporters and has translated into higher beef prices in the international market. In addition, the prospect of a stronger dollar contributes to increasing the profitability of exports.

In this environment, in 2015, our efforts in Brazil and in rest of South America will be, first, move on with our growth plan in South America, looking for accretive (31:10) opportunities, which with quick payback of its investments, acquisitions that have (31:18) or positive impact on our leverage.

Second, speed up the decision making process. In this context, we redesigned our corporate business model with the creation of four business units (31:32) as I have already mentioned.

Third, focus on cost control, operating efficiency benchmarks among our units' (31:40), integration of the acquired plants in order to capture our synergies.

Fourth, stronger efficiency in the purchase of cattle, which represents 80% of our costs, sales channels optimization in both, domestic and export markets.

Fifth, focus on free cash flow generation as this remains as our main goal in order to reduce the leverage. And, sixth, keep developing, training and qualifying our team, building a solid and motivated (32:13).

The recent movement of appreciation of the dollar also brings even more competitiveness to the Brazilian exporters, supports the opening of new markets and allows the company to generate further cash flow. Additionally, I would like to comment about the export data released by SECEX for January and February 2015 as it should be carefully analyzed.

In our view, the reduction in beef prices should not be seen as a change in the fundamentals of the market as there is a direct impact on the sale - as this is suffering a direct impact of the change on the sales mix and this is affecting the average price. Also, does not reflect Minerva performance in the beginning of the year. Our volumes are stable year-over-year.

In this context, yesterday, we announced that our 2015 net revenues guidance in the range of BRL 9.5 billion to BRL 10.5 billion as a result of the relevant capacity increase following the acquisitions as well as the organic growth of our operations. This guidance reinforce the strength of our activities and the positive prospect for this sector.

Now, to clarify any other point, I will turn over to the operator to begin the Q&A session. Thank you.

Q&A

Operator

Thank you. We will now start the questions-and-answer session for investors and analysts. Our first question comes from Andrew De Luca from Credit Suisse. Please go ahead with your question.

Q - Andrew C. De Luca {BIO 18025129 <GO>}

Hi, Fernando, Edison. Thank you very much for the call. I just have a question on the point that you just made on the export data. Can you just provide us with some additional color, specifically what you've been seeing in January and February, and can you just exclude the Uruguay and Paraguay assets? So, just to get a feel of what you guys are really seeing in terms of demand from the Brazil assets. Thank you.

A - Fernando Galletti de Queiroz {BIO 15387377 <GO>}

We are seeing - the main change that we saw in the first two months of the year is an increased demand of the Middle East. Some of the countries, especially in the Gulf, they are representing a much bigger share. So, the Middle East is playing an important role. As Minerva has a strong policy in these areas, we are able to remain stable our volumes on these places. Therefore, even though that Brazil is decreasing its volume, Minerva - with the stability, we are increasing our share.

Another relevant factor that we noted in the first two months is that Southeast Asia is also moving well. The countries that are suffering is really Russia and Venezuela. These, we are seeing down trade, so they are buying products that are cheaper. And we are seeing this is - this is what I put in the presentation is affecting the average price of the Brazilian exports.

Q - Andrew C. De Luca {BIO 18025129 <GO>}

Okay. And then just moving on to your expansion to the existing markets, I think you mentioned that you continue to plan to expand and so you know, Colombia, Uruguay, Paraguay. But I was wondering can you rank us with where you see the most value and the greatest opportunities between Brazil, Colombia, Uruguay and Paraguay?

A - Fernando Galletti de Queiroz {BIO 15387377 <GO>}

Well, Colombia, definitely there is much more upside. There is - it's a market that is more virgin. It's a market that the price gap on cattle, the cost of cattle is the widest. So, there is the potential of Colombia, but there are some bottlenecks on the infrastructure that we are dealing with. So, this is what presents the best opportunity.

The market - these three markets that you've mentioned, they are in different states. Uruguay is a more consolidated, more stable markets. On the other hand, any M&A implies higher multiples. Paraguay has a growing basis of supply. It's moving well. So Paraguay is doing - Paraguay is another area that we see with big potential. But if I have to rank, I would put Colombia on the top of the rank.

Q - Andrew C. De Luca {BIO 18025129 <GO>}

Okay. Great. And then just one last question. You mentioned that you purchased some of your bonds in the fourth quarter, but did you continue to purchase any in January and February as well?

A - Edison Ticle Melo e Souza Filho {BIO 20119771 <GO>}

Yes. We didn't purchase in the fourth quarter. We purchased during 2014, but fiscally in the second quarter. We purchased it during 2013, and we did some purchase also in January and February.

Q - Andrew C. De Luca {BIO 18025129 <GO>}

Okay. Can you give us the amount and were they also the 23s (37:45)?

A - Edison Ticle Melo e Souza Filho {BIO 20119771 <GO>}

I just can't say that it was 100% in the 23s (37:51).

Q - Andrew C. De Luca {BIO 18025129 <GO>}

Okay. Great. Thank you very much.

Operator

Our next question comes from Mauricio Martinez from GBM. Please go ahead with your question.

Q - Mauricio Martinez Vallejo {BIO 19835511 <GO>}

Hello, everyone. Thank you for taking my question and congratulations on the results. My question is regarding the REFIS program non-recurring expenses. I would like to know if this is a one-time charge or if we should expect further expenses on (38:21) in 2015. And also, if you can share with us about your expectation in beef revenues in the domestic market and if we should expect big strong figures witness (28:33) during this quarter or if the new plants acquired shall increase its exposure to exports going forward.

A - Fernando Galletti de Queiroz {BIO 15387377 <GO>}

Could you repeat the first question, please?

Q - Mauricio Martinez Vallejo {BIO 19835511 <GO>}

Yeah. The non-recurring expenses that you registered in this quarter, if this is only a one-time charge or if we should expect further expenses on this matter during the year.

A - Fernando Galletti de Queiroz {BIO 15387377 <GO>}

It's a one-time charge.

Q - Mauricio Martinez Vallejo {BIO 19835511 <GO>}

Great. And the second question.

A - Fernando Galletti de Queiroz {BIO 15387377 <GO>}

About the breakdown of the domestic and exports, we are seeing the local market moving sidelines. Minerva is very focused on exports and if the Brazilian economy gets - without any growth on the GDP and the currency keeps appreciating, definitely we shall see slightly exports. So, if we have to make a forecast, I would say two-thirds exports, one-third local market, but this number is revised in a weekly basis based on the market-changing conditions.

Q - Mauricio Martinez Vallejo {BIO 19835511 <GO>}

Great. Thank you.

Operator

Our next question comes from Jose Yordan from Deutsche Bank. Please go ahead with your question.

Q - Jose J. Yordan {BIO 1496398 <GO>}

Hi. Good morning, guys. I have a couple of questions. The first one is about tax conversion. In the past couple of years, we've seen cash conversion spiking during the first quarter versus the fourth by four, five days, whereas in the prior four years of that, it typically goes down. And I was wondering what we should expect for the first quarter of 2015.

I know in the last two years, this was a voluntary thing. But any color you can give us as to whether those spikes that have occurred in the first quarter are a thing of the past, or whether it might happen again this year.

And then my second question was - I mean you mentioned Columbia not being focused on exports. Does the recent devaluation and obviously increasing competitiveness of that market change anything or are those bottlenecks that you're talking about impairing any substantial increase in volumes available for export?

A - Fernando Galletti de Queiroz {BIO 15387377 <GO>}

Jose, about your first question, well, as you pointed, the first quarter is normally the weakest quarter during the year. So, normally, working capital needs may normally

FINAL

Bloomberg Transcript

FINAL

increase in the first quarter because it's a tool that we use to maximize returns and to preserve profitability. However, it's too early to give you more deep color on what will be the first quarter in terms of working capital. What I can tell you is that you're right on saying that the first quarter is normally the weakest quarter of the year, every year four years from now (41:38).

About Colombia, Colombia, they have been, in the past, the only country that they were focused on exports was Venezuela. So, therefore, they even developed the relationship with the customers outside there. There are some volumes that we saw moving last year. But we see that the kind of cattle that Colombia has, the developments that we are seeing on the supply side on the cattle breeding and the cattle fattening side, the increase of productivity makes Colombia a big potential in the global scenario of meat trade. So, we shall see Colombia playing a more important role on exports from now on.

Q - Jose J. Yordan {BIO 1496398 <GO>}

But I mean, if you come in on the run, and use your relationships that you already have, et cetera, are you able to - will you have enough volume to do so or it will all depend on who pays up the highest price?

A - Fernando Galletti de Queiroz {BIO 15387377 <GO>}

Definitely, Minerva sales structure, sells not only Brazil, but also Uruguay, Paraguay, Colombia will be another origin to be added to these countries. Take an example, we have a strong work on the Egyptian market. We can right away place Colombia beef on the Egyptian market. Russia is another example. Even though the Russian market is decreasing, the volumes of Colombia can be easily absorbed by our sales force. So, there is a lot of synergies that we will leverage the Colombia exports.

Q - Jose J. Yordan {BIO 1496398 <GO>}

Great. And if I could have a third question, please. You talked about a change in your organizational structure, et cetera. If you can give us a little more color on that whether it will have any significant impact in the way we see the numbers, number one. And number two, what are the advantages you hope to - I mean, is this more of an internal reorganization to be more productive, et cetera, or is there more to it than that?

A - Fernando Galletti de Queiroz {BIO 15387377 <GO>}

No. You're not going to see any changes on the way that you see the numbers. This is a change on the structure to give more agility, to give more speed of the response for the market, to increase the exchange of best practices benchmarks among the unities.

As I said, there will be four unities. The Brazilian unity will foresee overall Brazil that takes care of purchase, production and sales both in the local and export markets. Another one exactly the same on the rest of the South America on the (44:46). A third one for logistics and distribution, that's a separate business unity. And the fourth one on their other business like hides, live cattle, feedlots that represents another area. Each of these areas they have below them the buyers, the sellers and the production. And what they have is (45:15) structure that supports them in the terms of finance, HR, administrative controls

Bloomberg Transcript

that gives them the full support in standardizing the procedures. It's much more internal restructuring, empowering the team, and giving them more tools to act in the speed that this market requires.

Q - Jose J. Yordan {BIO 1496398 <GO>}

Very, very clear. Thanks a lot.

Operator

Our next question comes from Christina Romach (45:55) from HSBC. Please go ahead with your question.

Hi. Thank you for the call. I just have a couple quick questions. First of all, thank you for the disclosure on your gross cash and debt versus how much you've bought back. So, just to clarify on that, on the 2023s, as shown on (46:15) Bloomberg original outstanding of \$1,050 million. So then, I think, you bought back base \$150 million, so that brings me to \$900 million. But you're recording that bond on a gross basis already at BRL 2,400 which is about \$900. So, is it true, outstanding \$900 million or \$750 million?

A - Edison Ticle Melo e Souza Filho {BIO 20119771 <GO>}

Well, in our capital, you are right in your calculation. Yeah, the total amount that was sold was \$1.050 billion that is outstanding. We bought back roughly \$150 million, so you have \$900 million outstanding. However, as we are considering the bonds that we're purchasing in our cash, when we go to our capital structure and to the debt amortization schedule, we consider the whole \$150 million outstanding to draw the chart.

Q - Operator

Right. So, reduced by cash, but the true amount of outstanding on the 2023s is \$900 million not (47:25) because when you show the gross and the buyback, maybe it's still misleading because the gross debt on your balance sheet is showing the 2023 is at \$900 million already. That's - you know what I mean?

A - Fernando Galletti de Queiroz {BIO 15387377 <GO>}

It has to do - it has to do with the accrued price...

Q - Operator

Yeah.

A - Edison Ticle Melo e Souza Filho {BIO 20119771 <GO>}

...the premium of price that we paid when we issued the 2023 and we bought back the 2017, 2019 and 2022. So, there is nothing misleading the market. There is nothing wrong in the balance sheet. It was also the...

Q - Operator

Right. It's the accounting.

A - Fernando Galletti de Queiroz {BIO 15387377 <GO>}

It's completely in line with the IFRS criteria of accounting (48:10).

Q - Operator

Understood. And that's why gross debt will continue to go up. Got it. Because you're recording it below face value. Understood. Okay. By 150 about, which is a pretty good number.

Second follow-up, if you don't mind is, talking about your working capital cash cost, cash days. And so, I was noting (48:30) accounts payable and other suppliers in your balance sheet increased by BRL 235 sequentially. Just wondering if you could - is that something that's sustainable, because that really helped your free cash flow for the quarter? Thank you. That's it.

A - Edison Ticle Melo e Souza Filho {BIO 20119771 <GO>}

The account of payables, that's increased is related to the prepayment of clients in the export market. As we have already disclosed in the second quarter and we give a complete explanation, I would suggest you to go back to the release of results of the second quarter to have a more color and understand what is in this account. It is related to our credit policy with countries and specific clients that we are requiring down payments when we do exports. To give an example, some countries like Venezuela, we're just selling. If we have 100% advanced payment. In the case of Egypt, Russia, it can range from 15% to 50%, 60%. So all the money that is down paid is in our balance sheet is in this account of payables, other payables that you are referring to.

Q - Operator

Okay. Thank you.

Our next question comes from Paul Trejo from BlackRock. Please go ahead with your question. And Mr. Trejo had disconnected. We'll move on to our next question, (50:14). Please go ahead with your question.

Thank you. Debt increased 55% during the year, how much of this increase is explained by the currency depreciation. And does gross debt include any outcome of hedging activities. And last you have any guidance for operating margin and working capital requirements for this year? Thank you.

A - Edison Ticle Melo e Souza Filho {BIO 20119771 <GO>}

The debt increase, the gross debt, the net debt increase was 75% to 80% related to the currency depreciation and 25% related to working capital needs in the year. What's your second question?

FINAL

Bloomberg Transcript

Q - Operator

Does gross debt amount includes any outcome of hedging activities? Is it net of derivatives?

A - Edison Ticle Melo e Souza Filho {BIO 20119771 <GO>}

. Yeah. Yeah. It's net of derivatives.

Q - Operator

Which amount?

A - Edison Ticle Melo e Souza Filho {BIO 20119771 <GO>}

So all these derivatives are market-to-market to the fair price. So honestly, I don't have the amount here, but if you go to the notes on our balance sheet, we will find all the derivatives that we have opened, how the results of them and how they are impacting the gross debt.

Q - Operator

All right. Unless you have any guidance for operating margin and working capital requirements for this year?

A - Edison Ticle Melo e Souza Filho {BIO 20119771 <GO>}

No guidance. What I can tell you is that in terms of cash conversion cycle, we ended the year at 23 days, and we have a target to get back to a range between 15% to 20%.

Q - Operator

All right. Thanks a lot.

Our next question comes from Jeronimo De Guzman from Morgan Stanley. Please go ahead with your question.

Q - Jeronimo De Guzman {BIO 15888043 <GO>}

Hi. Good morning. Thanks for taking my question. I wanted to go back to what you mentioned on the exports. You mentioned that at the beginning of the year, your exports have been flat. To me, this seems like a big deceleration versus the fourth quarter level. And also, it would imply that given that you have almost 40% higher capacity that you're increasing the share of the domestic market at the beginning of the year. So, I'd like to better understand what is driving this change? And is it that - also that are you not able to divert some of the supply to new markets in export markets? Or are you able to find better opportunities on the domestic market for these volumes?

A - Fernando Galletti de Queiroz {BIO 15387377 <GO>}

Well, again, there is a different mix that was exported during the first two months of the year. But Minerva hasn't decreased (53:01) its total volume. That means that we are gaining share on exports because as Brazil decreases and we remain stable, our share has been increasing. The local market represented no problem on absorbing the different kind of products that was left in here, mainly due to our strategy of the diversification for the small and medium-sized retailers and the foodservice.

So, the total, of course, that we're not disclosing the numbers of the first two months, but the operation remains, volume wise and breakdown wise, the exports versus local market, very stable comparing to the previous months.

Q - Jeronimo De Guzman {BIO 15888043 <GO>}

. Thanks. That's helpful. And then going back to Colombia, just wanted to see if you could give us any additional color. You mentioned that the model is different right now with the retailers in many cases being involved in the slaughter and the operation. So, just wanted to get your sense of how easy it is to change kind of that business model as a behavior of the industry. Is there a lot of willingness to change or could this be something that takes some time to adjust?

A - Fernando Galletti de Queiroz {BIO 15387377 <GO>}

From our researches and from our studies that we have been conducting for the last two years, we see a big willingness for the retailers or for the industries that are there to change their model. They are going to a model that is the model that is consolidated in the rest of the world. And especially if we bring the export technology, the exports knowhow, this helps on accelerating this process and making the retailers more competitive, making the industry more competitive. So, there is a gain for everybody that is linked to the chain.

Q - Jeronimo De Guzman {BIO 15888043 <GO>}

Okay. Great. Thank you.

Operator

And, ladies and gentlemen, at this time, I'm not showing any additional questions. I'd like to turn the conference call back over to Mr. Fernando Queiroz for any closing remarks.

A - Fernando Galletti de Queiroz {BIO 15387377 <GO>}

To conclude the presentation, I would like to thank our Minerva's team who devoted the year for - to achieving the solid results in 2014 and who have been continuously committed to the pursuit of the sustainable growth, great efficiency, and opportunities that led us to better results. We remain at your disposal for any further clarification that you may need. Thank you very much.

Operator

Ladies and gentlemen, that does conclude today's presentation. You may now disconnect your telephone lines. Have a nice day.
